Description	Part Number	A-DC	E-DC	DC	Origin	E-RRP (Euro)	Start Of Sales
Blaupunkt dynamic route guidance (TMC)	KE283-99950	9	R	96C	DE	202.38	11/00

The digital traffic radio data channel continually receives up-to-date data on the current traffic situation. After you have entered the driving route or an area, you can choose to receive only those messages which are relevant to the area you are travelling in. As a result, the latest traffic information is available to you, custom-tailored to meet your own individual needs, at the touch of a button. Messages can be repeated as often as required. This service is available free of charge. The road network and a language code are stored on the TMC card. The language code determines the language in which the messages are reproduced. As a result, the TMC cards make it possible to receive traffic information in your own language even in foreign countries. As such, RDS-TMC makes a significant contribution to stress-free driving and increases overall road safety. Areas of traffic congestion can be efficiently avoided.
